

## Chapter 29: Hypermagnesemia

To get a copy of the book, visit: [www.fluidtherapy.org](http://www.fluidtherapy.org)

# Table of Contents

## **Part 1 Physiology**

Overview of total body fluid distribution, water balance, and electrolyte compartments.

**Chapter 1**

## **Part 2 Basics of Intravenous Fluids and Solutions**

Introduction to crystalloids and colloids, their composition, clinical use, precautions, and contraindications.

**Chapter 2-5**

## **Part 3 Fluid Replacement Strategies**

Principles of fluid therapy, including maintenance, resuscitation, and special considerations for the elderly.

**Chapter 6-9**

## **Part 4 Parenteral Additives**

Composition, clinical applications, and precautions for various parenteral additives.

**Chapter 10-14**

## **Part 5 Hemodynamic Monitoring**

Principles and techniques for assessing fluid status and cardiac output, using basic and advanced methods.

**Chapter 15-19**

## **Part 6 Electrolyte Disorders**

Causes, presentation, diagnosis, and management of various electrolyte imbalances.

**Chapter 20-29**

## **Part 7 Acid-Base Disorders**

Concepts, interpretation, and management of metabolic and respiratory acid-base disorders.

**Chapter 30-33**

## **Part 8 Fluid Therapy in Medical Disorders**

Guidelines for fluid management in conditions like GI diseases, liver disorders, respiratory issues, and diabetic emergencies.

**Chapter 34-41**

## **Part 9 Fluid Therapy in Surgical Disorders**

Fluid management before, during, and after surgery, including TURP syndrome and burns.

**Chapter 42-47**

## **Part 10 Fluid Therapy in Pediatrics**

Special considerations for fluid management in children and neonates, including resuscitation, maintenance, and oral rehydration.

**Chapter 48-50**

## **Part 11 Fluid Therapy in Obstetrics**

Fluid management strategies for pregnancy, cesarean delivery, preeclampsia, and labor-related hyponatremia.

**Chapter 51-54**

## **Part 12 Parenteral Nutrition**

Principles, indications, and administration of parenteral nutrition, with disease-specific guidelines and complication management.

**Chapter 55-57**

# 29 | Hypermagnesemia

<b>Etiology .....</b>	<b>336</b>	<b>Diagnosis .....</b>	<b>337</b>
<b>Clinical Features .....</b>	<b>336</b>	<b>Management.....</b>	<b>337</b>

Hypermagnesemia is an uncommon electrolyte disorder defined as serum magnesium concentration above 2.6 mg/dL (1.1 mmol/L, or 2.14 mEq/L). As a normal kidney can effectively excrete magnesium load, hypermagnesemia is rarely seen in clinical practice if renal function is normal.

## ETIOLOGY

Hypermagnesemia is frequently iatrogenic and almost always occurs either due to impaired excretion of magnesium in acute kidney injury (AKI) or chronic kidney disease (CKD) or the administration of magnesium in a large amount [1–4].

Common causes are:

- Renal failure: AKI or CKD patients receiving magnesium-containing antacids, laxatives, or IV fluids [3, 5, 6].
- Excessive magnesium intake: Treatment of preeclampsia or eclampsia with IV magnesium sulfate, aggressive treatment of hypomagnesemia with IV magnesium, intake of large amounts of magnesium salts as cathartics or antacids, and use of rectal magnesium sulfate enemas.
- Compartment shift or leak: Diabetic

ketoacidosis untreated, tumor lysis syndrome, acute rhabdomyolysis, hemolysis, and severe burns.

- Miscellaneous causes: Milk-alkali syndrome and impaired renal excretion of magnesium due to primary hyperparathyroidism, adrenal insufficiency, and hypothyroidism.

## CLINICAL FEATURES [7, 8]

Symptoms of hypermagnesemia are chiefly neuromuscular, cardiac, and related to hypocalcemia, which varies as per the magnesium level and, in severe form, can be serious and potentially fatal, as summarized in Table 29.1.

**Neuromuscular manifestations:** Hypermagnesemia inhibits acetylcholine release from the neuromuscular endplate, causing the blockage of neuromuscular transmission leading to a neuromuscular symptom. It includes muscular weakness, lethargy, loss of deep tendon jerks, muscular paresis leading to respiratory depression, respiratory failure, and quadriplegia. In addition, due to smooth-muscle paralysis, hypermagnesemia may present as paralytic ileus or urinary retention.
