

## **Chapter 48:**

Resuscitation and Maintenance Fluid Therapy in Children

## **Table of Contents**

#### Part 1 Physiology

Overview of total body fluid distribution, water balance, and electrolyte compartments.

**Chapter 1** 

#### Part 2 Basics of Intravenous Fluids and Solutions

Introduction to crystalloids and colloids, their composition, clinical use, precautions, and contraindications.

Chapter 2-5

#### Part 3 Fluid Replacement Strategies

Principles of fluid therapy, including maintenance, resuscitation, and special considerations for the elderly.

Chapter 6-9

#### Part 4 Parenteral Additives

Composition, clinical applications, and precautions for various parenteral additives.

Chapter 10-14

#### Part 5 Hemodynamic Monitoring

Principles and techniques for assessing fluid status and cardiac output, using basic and advanced methods.

Chapter 15-19

#### Part 6 Electrolyte Disorders

Causes, presentation, diagnosis, and management of various electrolyte imbalances.

Chapter 20-29

#### Part 7 Acid-Base Disorders

Concepts, interpretation, and management of metabolic and respiratory acid-base disorders.

Chapter 30-33

#### Part 8 Fluid Therapy in Medical Disorders

Guidelines for fluid management in conditions like GI diseases, liver disorders, respiratory issues, and diabetic emergencies.

Chapter 34-41

#### Part 9 Fluid Therapy in Surgical Disorders

Fluid management before, during, and after surgery, including TURP syndrome and burns. **Chapter 42-47** 

#### Part 10 Fluid Therapy in Pediatrics

Special considerations for fluid management in children and neonates, including resuscitation, maintenance, and oral rehydration.

Chapter 48-50

#### Part 11 Fluid Therapy in Obstetrics

Fluid management strategies for pregnancy, cesarean delivery, preeclampsia, and labor-related hyponatremia.

Chapter 51-54

#### Part 12 Parenteral Nutrition

Principles, indications, and administration of parenteral nutrition, with disease-specific guidelines and complication management.

Chapter 55-57

# **48** Resuscitation and Maintenance Fluid Therapy in Children

Indications and Goals 567
Reasons for Special
Considerations 568
Resuscitation IV Fluids for Children. 569
Selection of resuscitation fluids 569
Crystalloids vs. colloids debate 569
Normal saline vs. balanced
crystalloids debate569
Role of blood transfusion 571
Resuscitation fluid administration 572
Timing 572
Bolus vs. continuous infusion 572
Volume of fluid bolus 572
Avoiding volume overload 572
Maintenance IV Fluids for Children573
Goals 573
Maintenance requirements of
IV fluids573
Prescribing maintenance IV fluids 574
Hypotonic fluids outdated 574

Basis of shift from hypotonic to isotonic fluids575
Current recommendation: Isotonic maintenance fluids 575
Commercial vs. custom-made solutions576
Choosing appropriate isotonic maintenance fluids
Considerations of dextrose and potassium content
Exceptions to standard recommendations577
Rate of maintenance fluids - controversy577
Avoid fluid overload 577
Maintenance IV Fluids for Neonates578
Physiological considerations 578
Prescribing maintenance fluids 579
Prescription Summary of Maintenance Fluid Therapy

Fluid therapy in children is an essential aspect of managing critically ill individuals, and appropriate fluid therapy can be lifesaving. The primary goal of resuscitation fluids is to establish hemodynamic stability, ensuring adequate intravascular volume and tissue perfusion. Maintenance fluids, on the other hand, are administered to achieve proper hydration and maintain electrolyte balance.

### INDICATIONS OF IV FLUID THERAPY

Oral fluid replacement is always a safe and preferred mode. The indications of IV fluid therapy include correcting or maintaining fluid and electrolyte balance in conditions such as shock, severe dehydration, uncontrolled vomiting or diarrhea, inability to drink, paralytic

To get a copy of the book, visit: www.fluidtherapy.org

ileus leading to abdominal distension, impaired sensorium, and other serious complications.

**Goals:** IV fluid replacement aims can be broadly categorized into three groups: Resuscitation, maintenance, and replacement [1]. Distinguishing these reasons is crucial because the choice of fluids, their composition, volume, and administration rates vary depending on the patient's clinical status and specific indications. It's essential to select the appropriate IV fluids tailored to each situation.
